

Peaky Travelers

Manual de programador

Características

Visual Studio Code 1.78.2

Composer 2.5.5

Php 8.1.10

Laravel 4.5.0

Laragon Full (64-bit): Apache 2.4,

Node 18.16.0

Spatie 10.0.0

Computadora:

Windows 11

Nombre del dispositivo	Viernes
Procesador	Intel(R) Core(TM) i5-9400F CPU @ 2.90GHz 2.90 GHz
RAM instalada	32.0 GB
Id. del dispositivo	505EE9AA-E837-48E1-9BBD-A35233766428
Id. del producto	00330-80000-00000-AA707
Tipo de sistema	Sistema operativo de 64 bits, procesador x64
Lápiz y entrada táctil	La entrada táctil o manuscrita no está disponible para esta pantalla

Seeds y migraciones

The screenshot shows the Visual Studio Code interface with the Explorer sidebar on the left displaying the project structure. The file `2019_08_19_000000_create_failed_jobs_table.php` is selected under the `migrations` directory. The main editor displays the content of this file, which is a Laravel migration class. The code defines an `up()` method to create a `failed_jobs` table with columns for `uuid`, `connection`, `queue`, `payload`, `exception`, and `failed_at`. It also defines a `down()` method to drop the table if it exists. The status bar at the bottom indicates the file is at line 1, column 1, with 4 spaces, UTF-8 encoding, and LF line endings.

```
1 <?php
2
3 use Illuminate\Database\Migrations\Migration;
4 use Illuminate\Database\Schema\Blueprint;
5 use Illuminate\Support\Facades\Schema;
6
7 return new class extends Migration
8 {
9     /**
10      * Run the migrations.
11      */
12     public function up(): void
13     {
14         Schema::create('failed_jobs', function (Blueprint $table) {
15             $table->id();
16             $table->string('uuid')->unique();
17             $table->text('connection');
18             $table->text('queue');
19             $table->longText('payload');
20             $table->longText('exception');
21             $table->timestamp('failed_at')->useCurrent();
22         });
23     }
24
25     /**
26      * Reverse the migrations.
27      */
28     public function down(): void
29     {
30         Schema::dropIfExists('failed_jobs');
31     }
32 };
33
```

Ruta web.php

The screenshot shows the Visual Studio Code interface with the Explorer sidebar on the left displaying the project structure. The file `web.php` is selected under the `routes` directory. The main editor displays the content of this file, which defines the application's routes. It includes routes for the dashboard, Londres, ejemplo, listaImg, listado, viaje, and various CRUD operations for the 'ejemplo' and 'nuevoA' models. The status bar at the bottom indicates the file is at line 26, column 50, with 6 spaces, UTF-8 encoding, and LF line endings.

```
30 });
31
32 Route::get('/dashboard', function () {
33     return view('dashboard');
34 })->middleware(['auth', 'verified'])->name('dashboard');
35
36 Route::get('/londres', function () {
37     return view('londres');
38 })->name('londres');
39
40 Route::get('/ejemplo', function () {
41     return view('ejemplo');
42 })->name('ejemplo');
43
44 Route::get('/listaImg', function () {
45     return view('listaImg');

Migracion create_articulos

The screenshot shows the Visual Studio Code interface with a Laravel project. The Explorer sidebar on the left shows the file structure, with the 'migrations' folder expanded. The file '2023_05_30_212659_create_articulos.php' is selected. The main editor displays the content of this migration file. The code defines a migration class that creates a table named 'articulos' with columns for 'id', 'titulo', 'ciudad', 'pais', 'autor', 'contenido', and ten image fields ('imagen1' through 'imagen10'). It also includes a 'down()' method to drop the table if it exists.

```
1 <?php
2
3 use Illuminate\Database\Migrations\Migration;
4 use Illuminate\Database\Schema\Blueprint;
5 use Illuminate\Support\Facades\Schema;
6
7 return new class extends Migration
8 {
9     /**
10      * Run the migrations.
11      */
12     public function up(): void
13     {
14         Schema::create('articulos', function (Blueprint $table) {
15             $table->id();
16             $table->string('titulo');
17             $table->string('ciudad');
18             $table->string('pais');
19             $table->string('autor');
20             $table->text('contenido');
21             $table->string('imagen1');
22             $table->string('imagen2');
23             $table->string('imagen3');
24             $table->string('imagen4');
25             $table->string('imagen5');
26             $table->string('imagen6');
27             $table->string('imagen7');
28             $table->string('imagen8');
29             $table->string('imagen9');
30             $table->string('imagen10');
31         });
32     }
33
34     /**
35      * Reverse the migrations.
36      */
37     public function down(): void
38     {
39         Schema::dropIfExists('articulos');
40     }
41 }
```
